IDENTIFIERS Project Head Start; School District Questionnaire

ABSTRACT

Provided are findings of a survey of public school districts conducted by the Public School Early Childhood Study, a 30-month, three-phase investigation of the involvement of public schools in the delivery of early childhood programs. The district survey was designed to answer two basic questions: (1) What kinds of early childhood programs do school districts run? and (2) What are the characteristics of these programs with regard to details of operation, funding, staffing, ancillary services, eligibility, and involvement of parents and particularly working parents? The survey consisted of a district overview and program questionnaires. A total of 1,225 districts completed the district overview; 1,681 program questionnaires were returned. Findings concern program operation, class size and ratios, teacher qualifications, paraprofessionals, salaries and benefits, and parent involvement. There were more special education programs than any other kind of program, and more were enrolled in Head Start programs than in any others. It is concluded that a major trend in early childhood education is the increasing involvement of public schools as providers of early childhood programs. Additional questions raised by the data are discussed and survey instruments are provided. (RH)

I. INTRODUCTION

The Public School Early Childhood Study is a thirty-month, three-phase study investigating the involvement of public schools in the delivery of early childhood programs. The Study's objectives are to examine the practical operation of such programs, their developmental soundness with respect to young children, their responsiveness to the families that use them, and the policy implications that accompany an enhanced public school role in the world of young The three parts of the Study are: a survey of all 50 states, a survey of public school districts and case studies of 13 programs in 12 states. Only the district survey will be reported here. The Study is a joint project of Bank Street College and Wellesley College and is funded by the Carnegie Corporation of New York and the Ford Foundation.

Background

No national surveys have been conducted on the nature and extent of public school programs for children under 5. Only two national surveys have been undertaken in regard to public school enrollment of 3 and 4 year olds, one by the Bureau of the Census and one by the National Center for Education. Both are based on the 1980 current Population Survey conducted by the Bureau of the Census. Preprimary enrollment continues to increase among 3 and 4 year olds. No data exist on the eurollment of children younger than 3.

No national data base on early childhood programs exists. The most recent national study of day care was conducted from 1977-1979. The Center for Statistics of the US Department of Education reports enrollment data on children younger than kindergarten entry age in public description of the fifty states which incomplete. The Center compiles data from each of the fifty states which younger than kindergarten entry age in public schools, but those data are usually maintain enrollment data only for programs that are mandatory and/or for which the state is providing funds. Data are not usually collected on programs operated by school districts and supported by local tax monies.

) The Head Start Office in the Administration for Children Youth and Families of the US Department of Health and Human Services collects extensive data annually

Paper prepared for AERA Roundtable, "Studies of Day Care and Preschool Education," Annual Meeting, Washington, DC, April 1987.

> "PERMISSION TO REPRODUCE THIS MATERIAL HAS BEEN GRANTED BY

from Head Start programs. It does not systematically categorize these data by sponsorship, although it is possible to determine whether a grantee or delegate agency is a public school district.

Purpose of the District Survey

The district survey was designed to answer two basic questions: What kinds of early childhood programs do school districts run? What are the characteristics of these programs with regard to details of operation, funding, staffing, ancillary services, eligibility, involvement of parents and particularly working parents?

II. METHOD

The Sample

The survey was aimed at all public school districts which operate any program for children younger than kindergarten entry age. One potential source for identifying these public school districts is the early childhood specialists in state departments of education. This method presents similar problems to those outlined above: state3 generally collect data only on programs that they fund. In those states with no funding stream for early childhood, little information is available.

Education data firms are in the business of accurately identifying potential markets for their customers (primarily marketers of educational materials and services). As one source of information, we chose the company with the best reputation for providing quality data for the early childhood market. The sample was selected by combining information from a variety of sources including the educational data firm. School districts with at least one school identified as having a prekindergarten program, districts with any central office personnel identified as an early childhood supervisor, and districts which either administer a Heau Start grant or operate at least one Head Start program were included. There are approximately 16,000 public school districts in the US; our sample consisted of 2,773 districts.

The survey consisted of two parts: the district overview and a program questionnaire. 1225 districts completed the district overview; 1681 program questionnaires were received. This represents a 44% response rate for the district overview.

The responding districts and the nonrespondent group were compared on a number of dimensions. At the p < 1 level of confidence, the respondents did not differ significantly from the nonrespondents on geographical distribution, urbanicity, size of district, per pupil spending, property wealth, or ethnicity.

III. PROCEDURE

The Instrument

The survey instruments, an overview of district involvement and a program specific questionnaire, were designed collaboratively by the staff of the study

and were reviewed by members of the study's Advisory Panel. The overview section was designed to be completed in a short time (15 minutes) by the superintendent or his/her designee. The program section was designed to be completed by the supervisor of each specific program in about 30 minutes.

The Field Test

The final drafts were field tested in three sites. The selected sites differed on demographic and programmatic characteristics: a rural/suburban district in Connecticut, a near-metropolitan district in New York, and a suburban/small city district in New Jersey. These three states also differ in how early childhood programs are financed through their state departments of education. New York has a cargeted, state funded, prekindergarten program; New Jersey reimburses districts for prekindergarten programs using the same formula as for kindergarten; while Connecticut has no state program, but was considering early childhood legislation at the time.

The field test yielded important information about certain aspects of the design and content of the questionnaires and also gave us direction with regards to encouraging districts to respond. For example, field test participants expressed a strong desire to offer their opinions on the importance of early childhood programs and on future trends in early childhood in their districts, in addition to providing the factual/numerical information the instruments requested. In response, we expanded the open ended section of the questionnaire which was designed to tap respondent's opinions and views. The precise wording of some questions and optional responses were revised in response to participant's comments on the clarity of our questions.

Distribution

The superintendent of each district in the sample was mailed a package containing one district survey with a cover letter and brief description of the full study attached and three copies of the program questionnaire each wich a cover letter addressed to the program director attached. Copies of these instruments and cover letters are included in Appendix A.

IV. RESULTS

Throughout this report wherever appropriate, the results will be reported by program type since there are many different types of programs and much of the information is more meaningful when seen in relation to program type, rather than in the aggregate. All tables can be found at the end of the report.

Public schools are operating a variety of different types of programs for children of all ages from birth through age five. As Table A illustrates, the largest number of programs represented in our survey are special education programs. The largest number of children are enrolled in Head Start programs. It is possible that Head Start programs may be overrepresented in our sample because those districts that operate Head Start programs are more easily identified and were thus more likely to be included in the survey.

Program Operation

Although most programs are operated in public school buildings, a sizable proportion (16%) of the respondents reported operating in at least one site not located in a public school building.

By far the most common operating schedule for public school early childhood programs of all types (except child care) is three hour per day sessions offered five days per week for the period from September through June and closing on all school holidays and vacations. Table B presents data on length of year by program type.

The daily session length and the number of sessions per week vary with the age of the child. As Table C illustrates, younger children are more likely to be in programs for fewer than three hours per day and for fewer than five days per week.

Class Size and Ratios

Small group sizes and to a lesser degree low staff:child ratios are factors related to the quality of early childhood programs. Public school programs in our survey are operating within the limits of good practice as illustrated in Table D. Teachers and paraprofessionals are counted as staff in computing the ratios. In some cases (13%) parent volunteers are included. For example, most child care programs for teen parent/students require the teen parents to work in the classroom and count them in the ratios.

Teacher Qualifications

It is generally agreed in practice (and well-supported by research), that one determinate of quality in early childhood programs is staff who have training and experience directly related to the ages of children taught. Half of all respondents indicated that early childhood education certification was required for teachers in their programs. Nearly three-quarters require a Bachelor's degree. However, two thirds indicated that no previous experience was required for the employment of teachers. Fortunately, minimum requirements differ from practice. Among all program types, slightly more than half (52%) of the staff hired had both early childhood education certification and at least one year of experience teaching children younger than five.

Certification requirements for teachers are complex and not easily compared across states. A term such as "early childhood education certification" can mean a specific course of study including coursework and student teaching with children younger than kindergarten age in one state, and in another state may mean an endorsement (beyond the elementary teaching license) relating to kindergarten teaching.

Paraprofessionals

Most programs (87%) employ paraprofessionals for classroom work. The most common requirements for the employment of paras are a high school diploma or its equivalent (66%) and attaining at least age eighteen (30%). Experience is

4

rarely required. In practice, paraprofessionals who are hired exceed these minima; among all program types about 20% of the paras hired had both a year of early childhood training and at least one year of experience with young children.

Salaries and Benefits

Teachers in public school early childhood programs are nearly always employees of the district and usually receive the same salaries and benefits as other teachers, except for Head Start and child care programs in which teachers are twice as likely to be receiving lower salaries than other district teachers.

The typical teacher works 10 months a year earning an average salary of \$15,822 (with a BA) or \$20,081 (with an MA). In contrast, the typical paraprofessional works 26 hours per week for 36 weeks per year earning \$4974. Table E illustrates the mean 10 month salaries for teachers by program type.

Parents

Parent involvement is a key factor in quality programs. In response to our questions about parent involvement, nearly all programs (90%) reported offering parent-teacher conferences, about half have parent advisory councils or boards and about half report using parent volunteers. Parent advisory bodies are very likely (95%) in Head Start (as expected since that is a requirement for Head Start programs). More than 2/3 of child care programs had parent advisory groups. In contrast, only about 1/3 of Chapter I programs reported having parent advisory bodies. Parent groups were much less likely along all other program types.

The response to questions about program features that might help working parents, such as longer hours, summer or vacation programs, transportation to other programs, scheduling parent conferences after work hours, etc. was low; only about half the programs offered any such features. Of respondents across all program types, about half report scheduling parent conferences after regular work hours. About 1/4 will bus children to a location other than their own home, but this is overwhelmingly associated only with special education programs. Summer care is not widespread (20%) but is most likely to be offered by child care or special education programs.

V. DISCUSSION

We started our study with a question: what is the role of public schools in the early childhood system? We know part of the answer. Beyond any doubt, a major trend in early childhood education today is the increasing involvement of public schools as providers of early childhood programs. This paper attempted to sketch a picture of the extent and variety of these programs. As we have begun to answer our first question, other questions have emerged.

What is the purpose of these programs?

Historically, the purpose of public school ventures into early childhood were clear: the WPA nursery schools were to create jobs for unemployed teachers after the Depression: the Lanham Act day care centers during WWII were to care for children so their mothers could work in the war effort.

Currently there are many purposes. Parents seem to want one thing: 1 good education in a setting that can also care for their children while they work. Legislators and governors want another: 'to reform education and better prepare kids for school by starting earlier.

The schools get caught in the confusion: sometimes responding to the legislators with pre-k programs for disadvantaged children, and somtimes to the parents by offering pre-k programs with day care hours.

No matter what the purpose is, what is the quality of these programs?

What kinds of curriculum approaches will be used? Will these approaches be appropriate and continuous, that is, compatible with the prior and future experiences of the children?

Can we find enough qualified early childhood teachers or will we resort to overly prescribed curriculum guides instead?

Will we be willing to spend the large amounts of money necessary to keep the class sizes small enough, the teachers well-paid, and well-trained?

What about parents?

We know that programs based on the concept of parents as partners, programs that support and involve parents, are more effective. How are parents involved in decision-making, how are parents treated?

What about the working parents, especially the single working parents?

Maybe all this new attention and money would be better spent improving and expanding the current child care system.

Is it good policy to create more partday programs, for targeted populations of children?

We know that quality early childhood programs do benefit the most disadvantaged children, but we also know they do not necessarily have any long term effects for middle class children. Is the public school the right place for these programs? Programs like Head Start have existed in both schools and community agencies—perhaps these new programs aimed at disadvantaged kids should be delivered the same way—both by public schools and by other community organizations?

The purpose of our Study is to investigate and raise questions—which we have done. The task before us now is to begin to answer these policy questions in our communities, states and nation.

March 1986

Dear Superintendent:

The Ford Foundation and the Carnegie Corporation have funded Bank Street College and Wellesley College to conduct the first nationwide study of public school affiliated programs that serve children younger than kindergarten age. Your school district is among those selected to participate in this important study, which will inform and influence policy decisions concerning the role of public schools in the care and education of our children. Results of the study will be published, widely distributed, and presented at conferences and forums throughout the country. A more detailed description of the study is attached.

Your school district has been selected as part of our study. We need your help in supplying us with information about the prekindergarten programs in your district and giving us your expert opinion on early childhood programs in the public schools. All information will be treated with confidentiality. No information on any single district will be given out. Districts participating in this part of the study will receive a copy of the results.

Enclosed are:

- 1) A brief description of our study for your information.
- 2) A District Overview form (blue) to be completed and returned by you, and
- 3) Three Program Questionnaires (yellow) to be completed and returned by the director of each of your prekindergarten programs (or whoever you believe is most familiar with the details of a given program).

Figure return these questionnaires by April 18, 1986. If you have any questions, contact us at the above New York City address.

The next phase of our study concerns exemplary early childhood programs. If you would like to nominate one of your programs, please request the nomination form and guidelines by checking the appropriate box on the enclosed questionnaire.

We very much appreciate your help on this pivotal national study.

Sincorely,

Anne W. Mitchell Director Public School Early Childhood Study Bank Street College of Education

THIS QUESTIONMAIRE SEEKS INFORMATION ABOUT ALL PUBLIC SCHOOL AFFILIATED PROGRAMS IN YOUR DISTRICT WHICH SERVE PREKINDERGARTEN CHILDREN. PUBLIC SCHOOL AFFILIATED REFERS TO TWO KINDS OF PROGRAMS: 1) THOSE FUNDED AND/OR ADMINISTERED BY PUBLIC SCHOOLS, AND 2) THOSE RELATED TO PUBLIC SCHOOLS BY OTHER MEANS (E.G., PROVISION OF IN-KIND SERVICES, USE OF SPACE, ETC.). FOR EXAMPLE, CONSIDER HOW A HEAD START PROGRAM MIGHT BE AFFILIATED WITH YOUR DISTRICT. IF YOUR DISTRICT IS THE HEAD START GRANTEE, YOU DIRECTLY OFERATE AND ADMINISTER THE PROGRAM. THIS IS AN EXAMPLE OF THE FIRST KIND OF AFFILIATION. ON THE OTHER HAND, YOUR DISTRICT MAY RENT SPACE TO A HEAD START PROGRAM WHICH IS ADMINISTERED BY ANOTHER COMMUNITY AGENCY. THIS IS AN EXAMPLE OF THE SECOND KIND OF AFFILIATION. IN BOTH CASES, THE HEAD START PROGRAM IS PUBLIC SCHOOL AFFILIATED. PREKINDERGARTEN REFERS TO CHILDREN YOUNGER THAN KINDERGARTEN AGE (BIRTH TO KINDERGARTEN ENTRY AGE).

40 Check here if you wish to receive exemplary program nomination form and guidelines.

2/	
41-46	

1.	What	is	the	kinde	rgarten	entry	age in	your	district?
			Year	rs old	by (spe	ecify o	iate)		

THE FOLLOWING QUESTIONS (2, 3, 4, 5, and 6) REFER TO PUBLIC SCHOOL AFFILIATED PROGRAMS FOR CHILDREN YOUNGER THAN KINDERGARTEN AGE WHICH ARE FUNDED AND/OR ADMINISTERED THROUGH YOUR DISTRICT (I.E., THOSE THAT FIT THE FIRST KIND OF AFFILIATION DESCRIBED ON THE FIRST PAGE.

2. What types of program-funded and/or administered through your district--are available for children younger than kindergarten age? Some of these programs may be categorized by funding source (e.g., Head Start, Chapter 1, or state funded prekindergarten programs). Other programs may be categorized by purpose (e.g., special education or compensatory programs). Still other programs may be categorized by clientele (e.g., child care programs for children of district employees or nursery schools operated by high school students). In completing this questionnaire, it is extremely important that you identify all prekindergarten programs funded and/or administered by your district, and assign each program to one category only--even though the program may fit in several categories.
Check all that apply and indicate supervisor's name, title, and phone number.

Prekindergarten Name of Supervisor's Telephone Program Types Supervisor Title Number 47 62-78 Head Start 3/ 2-23 24-62 Chapter 1 49 63-79 Special education 4/ 2-23 50 24-62 State funded prekindergarten program 51 63-79 Locally funded pre-5/ 2-23 kindergarten program 52 24-62 Before school program (children aged 0-5) 53 63-79 After school program 6/ 2-23 (children aged 0-5) 24-62 Summer program (children aged 0-5) Program for infants 63-79 7/ 2-23 and toddlers 56 24-62 Child care program 63-79 Child care for children 8/ 2-23 of district employees 58 24-62 Child care for children of teenage students 59 63-79 Nursery school operated 9/ 2-23 by high school students 60 24-62 Combination of the above 63-70 Please describe 61 Other--any program which does not fit into the 10/ 2-40 above categories 41-60 Please describe

PLEASE BE SURE THAT ONE PROGRAM QUESTIONNAIRE (YELLOW) IS COMPLETED FOR EACH PROGRAM INDICATED ABOVE. IF YOU NEED MORE COPIES OF THE PROGRAM QUESTIONNAIRE, PLEASE PHOTOCOPY THE QUESTIONNAIRE OR CONTACT US TO REQUEST ADDITIONAL COPIES.

REMEMBER: PREKINDERGARTEN REFERS TO ALL PROGRAMS FOR CHILDREN FROM BIRTH TO KINDERGARTEN ENTRY AGE.

PUBLIC SCHOOL EARLY CHILDHOOD STUDY

Bank Street College Center for Children's Policy 610 West 112th Street New York, New York 10025 (212) 683-7200 Wellesley College Center for Research on Women Wellesley, Massachusetts 02181 (617) 431-1453

March 1986

Dear Program Director:

The Ford Foundation and the Carnegie Corporation have funded Bank Street College and Wellesley College to conduct the first nationwide study of public school affiliated programs that serve children younger than kindergarten age. Your school district is among those selected to participate in this important study, which will inform and influence policy decisions concerning the role of public schools in the care and education of our children. Results of the study will be published, widely distributed, and presented at conferences and forums throughout the country. A more detailed description of the study is attached.

Your Superintendent has identified your prekindergarten program as one in which we are interested. We need your help in supplying us with information about the program itself and giving us your informed opinion about early childhood programs in public schools. It is important that you complete the attached questionnaire for one program only. If you supervise more than one prekindergarten program, please request additional program questionnaires from your Superintendent. Complete and accurate information is, of course, extremely important. All information will be treated with confidentiality. No information on any single program will be given out.

For the purposes of this questionnaire, <u>prekindergarten</u> refers to all children from birth to kindergarten entry age. If any questions arise as you complete our questionnaire, please contact us at the above New York City address or phone Anne Mitchell at (212) 663-7200 ext. 313.

The next phase of our study concerns exemplary early childhood programs. If you would like to nominate one of your programs, please request the nomination form and guidelines by checking the appropriate box on the enclosed questionnaire.

Please return the questionnaire to us by April 18. Districts participating in this part of the study will receive a copy of the results.

We very much appreciate your help on this pivotal national study.

Sincerely,

Anne W. Mitchell Director Public School Early Childhood Study Bank Street College of Education
